Acknowledgments

The School of Visual Arts (SVA) at the College of Fine Arts (CFA) and the Boston University Art Gallery (BUAG) are pleased to present a retrospective exhibition of work by SVA Professor Emeritus Sidney Hurwitz, who taught at the School of Visual Arts from 1965 (when it was known as the Division of Art in the School of Fine and Applied Arts) to 1999, serving as Director from 1969 to 1975. He was also Director of the Boston University Art Gallery from 1968 to 1969—which was then part of the School of Visual Arts—and curated several important exhibitions. Given Hurwitz’s valuable contributions to both institutions, it seems more than fitting that the School of Visual Arts and Boston University Art Gallery have come together to celebrate the work and career of one of SVA’s prominent faculty emeriti.

The aptly titled Sidney Hurwitz: Five Decades features a selection of prints spanning fifty years of the artist’s production, from his early woodcuts and figure studies of the late 1950s to the intricately rendered etchings of industrial architecture started in the early 1970s, a subject for which he has become well known and continues to pursue today. Sidney Hurwitz: Five Decades is a result of a fruitful, year-long collaboration and we are indebted to the artist with whom many hours were spent in the studio poring over a lifetime of work and discussing the details of the exhibition.

We acknowledge that an exhibition of such scope would not be possible without the help and contributions of many other individuals. We would like to first thank the Artists’ Resource Trust, a fund of the Berkshire Taconic Community Foundation, without whose support this exhibition and catalogue would not be possible.

At Boston University we would like to sincerely thank David Campbell, Provost, and Hannelore Glaser, Associate Provost of Finance and Administration, for their support of the exhibition. We would also like to thank Walt C. Meissner, Dean ad interim, College of Fine Arts, and Lynne Allen, Director, School of Visual Arts, for their ongoing encouragement and enthusiasm of exhibitions programming.

We extend tremendous appreciation and gratitude to Patricia Hills, Professor of American Art, Department of Art History at Boston University, for generously contributing the essay for this publication.

The artist would like to acknowledge Elisa Fines for her administrative support, Ellen Young for her assistance with color-ation of print editions, and Marshall for his time and attention in documenting the work for reproduction. Thanks are also due to the Boston University Society of Retired Faculty and Staff for a grant award to the artist for the catalogue and exhibition.

Special thanks to Vicki Wright, former Director of The Museum of Art, University of New Hampshire (UNH), for her commitment and efforts to bring the exhibition to UNH in the fall of 2009.

Finally, we would like to thank Jamie Griffith at Stanhope Framers and at Boston University’s Creative Services, Diana Parziale for her thoughtful catalogue design and Jan Hauben for her always patient oversight of the publication’s production.

Marc Mitchell
Director ad interim, Boston University Art Gallery
Since the early 1970s, Sidney Hurwitz has focused on the industrial and urban landscape as the subject for his complexly organized and austerely beautiful intaglio prints. He has seen, studied, photographed, and thought about the elements of this landscape of factories, bridges, docks, and train stations. Away from the sites and back in his studio, he selects the sketches and photographs that best recall the light and shadow and intricate geometry of bricks and cement, steel and stone, girders and joists, hoppers and storage tanks, as well as pipes, ducts, vents, sheds, conveyer belts, chimneys, smokestacks, steel decks, railings, and ladder rungs. The results in his aquatint prints are what he has called, “the portrait, landscape, and still life of the industrial age.”¹ These representations of the actual sites, filtered through his experience and memories of them, become meditations on a heroic past of American industry. They are sites that have not yet lost their awesome presence.

Although drawn to printmaking soon after entering art school in the post-World War II years, Hurwitz would wait two decades before turning to the industrial landscape as the focus for his art. At the Worcester Art Museum in 1950, he soon discovered that printmaking appealed to him because prints enabled him to make his drawings “more tangible,” and he “found the idea of making multiples quite appealing.”² Carl Pickhardt taught him etching techniques, and, during his second year at the school, Hurwitz met the printmaker Leonard Baskin, ten years his elder. Baskin made a strong and lasting impression on the young artist, who took a turn at printing some of Baskin’s large woodcuts.³ After three semesters at the School of the Worcester Art Museum and with the encouragement of Baskin, Hurwitz enrolled at Brandeis University, where he studied English literature and art history and took studio courses with Mitchell Siporin and Peter Grippe. He then studied with David Aronson, Reed Kay, Jack Kramer, and Karl Forrest at Brandeis University, where he received his MFA in 1959. At the time, the art faculty at both Brandeis and BU held strong ties with figurative expressionism, a style and an outlook on art that influenced his choice of subject matter for many years.⁴ After teaching stints at the DeCordova Museum and Wellesley College, in 1965 he joined the faculty of the School of Fine and Applied Arts at Boston University, from which he retired in 1999.

A sabbatical leave from the University allowed Hurwitz to spend about eight months in London during the 1972–73 academic year.⁵ He sought out Islington Studios near his home in north London and introduced himself to Hugh Stoneman, a master printmaker who ran the Studios. He also frequented the Print Workshop run by Brigét Skold on Charlotte Street in Soho, London, and enjoyed the camaraderie of the London printmakers he met, several of whom

Sidney Hurwitz: Five Decades

by Patricia Hills
had been students of Stanley Hayter’s famous printmaking atelier in Paris. As Hurwitz honed his skills in intaglio printing, he became interested in the city itself and shifted his attention to city scenes as subjects for his prints. In 1986, he recalled:

I had begun wanting to translate the basic figure compositional styles of the woodcuts into intaglio and managed to do so with a few plates along those lines. Although this was not my first stay in London, living there made me acutely aware of the character of the architecture and the particularity of the cityscape. I was struck by the appearance of the somewhat shabby but solid aspects of the industrial urban environment of Islington and Hackney. I spent many hours walking and taking the tube to various parts of the city, sketching and photographing, and soon began to translate these images onto plates. The first prints marking this change in direction were Rooftops—Barnsbury, Highbury Station, Rooftops—Barnsbury [Figure 2], and Warehouses—Hackney. These were the beginnings of what has been a continuing involvement with urban, architectural, and industrial themes in my work.8

In his first London etchings, such as Blackfriars Bridge [Figure 1], he elaborated on the abstract geometry of the structures of the bridges and buildings. However, the physical reality fascinated him more. The sense of a place achieved through the telling features of the working-class suburbs of Islington and Hackney within spreading Greater London appealed to him, and in subsequent prints he focused on the specificity of the architectural elements, such as Highbury Station with its unique station platform, tracks, staircases, and tunnels. Cities that proudly display their nineteenth- and early twentieth-century industrial structures reminded Hurwitz of his own youth in Worcestershire, Massachusetts. Worcestershire, still the second largest city in New England after Boston, boasts venerable cultural institutions such as the Worcester Art Museum, the American Antiquarian Society, and Mechanics Hall and universities such as Clark, Holy Cross, and Worcester Polytechnic Institute. During World War II it hummed as an industrial city, but began its decline shortly thereafter, especially after the Massachusetts Turnpike, built in the late 1950s, bypassed the city. When a youngster, Hurwitz walked to school and downtown from the flat his family rented in a triple-decker house on Barclay Street, he could see the deterioration of old factories. Later, his family moved to West Bayston Street in the Green Dale suburb. Across from his home were railroad tracks along with storage sheds, a coal hopper, and conveyor belts to service the trains. A factory, Norton Abrasives, was a few blocks away and many of Hurwitz’s neighbors worked there.7 Today he remembers his fascination with walking through this industrial landscape of railroad tracks, equipment, and factories.

Hurwitz returned to London twice, in 1975 and 1976, in order to study the dockside facades of the Thames, the river that had made London a major industrial port in past centuries. His project was to produce a series of ten prints. Over a century before, the area of industrial London that perched on the banks of the Thames had fascinated another American, James McNeill Whistler. From the river’s banks near his studio in Chelsea, Whistler had viewed the docked ships and workers and had produced some of his most stunning pictures and several etchings. But whereas Whistler’s etchings look like delicate ink sketches (the result of an etching needle scratched into the wax-covered copper plate before the acid bath and printing) with meandering lines and cross-hatching to create darker tones, Hurwitz’s Thames prints, completed when he returned to Boston, are imposing and complex, 20-by-24-inch, intaglio compositions.

Hurwitz’s aquatint technique, for the Thames series and others, is to draw the contours and internal elements of the image’s design in detail on an opaque acid-resistant adhesive paper covering the plate. Thus, the arrangement of the lines and forms has priority in this process, and in many of the compositions he emphasizes the frontality of the forms, with the flat facades of the buildings parallelizing the picture plane. Hurwitz then carefully follows those guidelines to cut through the paper to score the plate, which is then placed in the acid bath. The acid etches the plate, leaving the etched areas uninked. The plate is then heated and when the resin melts, it forms a pattern of dots on the plate around which the acid penetrates, creating a pitted surface. Through a series of stages in which areas of the plate are coated with acid-resistant stop-out varnish and repeatedly dipped into the acid bath, Hurwitz can achieve degrees of biting and stopping out. Finally, he achieves tonal variations in his aquatint print. At the end of the process the plate is inked and the surface wiped, with the result that ink pressed into the areas of heavy biting resists being wiped away. These areas would be a velvety black, lightly bitten areas (more easily wiped of their ink) would have lighter tones. After inking and wiping, the plate would be put through a press and the image transferred to a dampened sheet of paper under heavy pressure.9

It is a meticulous process of working with and against the plate, but ultimately rewarding when the results produce a print such as Thames Series III—Woolwich [Plate 04]—a display of tonal variations from matte blacks and delicate nuances of grays to pale whites. Without actually using color, Hurwitz nevertheless achieves almost coloristic effects as in the light and dark patterning of bricks that make up the buildings in Thames Series V—Doors. In Thames Series IV—Storage, Hurwitz forces the eye to look and trick the eye into believing that one is looking at a photograph of a site, except that photographic detail has been eliminated and surfaces display a purity of reflected light without distracting highlights. The prints, moreover, have a physical tactility—a slight burr on the plates, a raised armature of lines, and, of course, the indentation of the plate mark, created when the damp paper and plate were run through the press. The physicality—the “finiteness”—of Hurwitz’s aquatint cannot be approximated by photographic reproductions. The greater Boston area Hurwitz found many areas of the industrial landscape to serve as potential subjects for his art. During the 1970s he turned to the Fort Point Channel area of South Boston, an area then undergoing urban renewal. The Fort Point Channel Bridge [Plate 03] was one of three prints in which Hurwitz focused more...
and more closely on the design qualities of the bridge’s intricate structure and mechanics. In 1979 Hurwitz embarked on a series of seven aquatints based on an active coal and natural gas terminal facility in Everett, Massachusetts. Sand and gravel installations he discovered in Everett (on Cape Cod) and in Weymouth, Massachusetts, provided the subjects for three more prints. About Weymouth he remarked, “The wonderful complexity of the storage tanks, conveyer belts, supports, etc. suggest the architecture of fantastic castles or amusement park rides.”

In his large prints, Hurwitz uses the plate mark, reminding us that this is not photographic realism but a handmade construction of his experience of the structures and forms.

In the early 1980s Hurwitz began to add color by hand to his prints. New York Roofscape II (Figure 3) has delicate washes that prints.

New York Roofscape II 1983 Watercolor, Aquatint 11 ¾” x 24 ¼”

Hurwitz continues to travel between the United States and Europe. He wrote to the German photographers Bernd and Hilla Becher, whose industrial photographs he had long admired, asking for suggestions as to where he might find interesting industrial sites. At their suggestion, in 2002 he went to Duisburg, Germany, to look at the obsolete Thyssen-Krupp AG steel plant that had shut down its operations in 1985. Since then, Duisburg civic leaders in partnership with government groups had hired the landscape architects Peter and Anna-Liese Latz to convert the buildings and the site into an industrial theme park.

At the centre of the park there is a decommissioned metal-works, the old industrial facilities of which are today being put to a variety of different uses. The former factory buildings have been converted to accommodate cultural and corporate functions; an old gas holder has become the biggest artificial diving centre in Europe; alpine climbing gardens have been created in the former storage bays; and an open link between the park and the city has been developed into a panoramic tower.

This park is for the residents (they can rent spaces for parties or to film movies) and tourists.

In his large prints, Duisburg-Thyssen I and Duisburg-Thyssen V, Hurwitz suggests something of the heroic scale of the steel company that contributed to the manufacturing power of Germany in the postwar years and that dominated the landscape of the Ruhr Valley. However, steel manufacturing did not disappear from Duisburg: a new modernized steel manufacturing complex was subsequently built by Thyssen-Krupp Steel at the edge of town.
In contrast to the imaginative retrofitting of the steel mills and furnaces to create the Duisburg-Nord Country Park, many of the old structures of European and American industry are left to corrode in the landscape, such as the giant cranes in Hurwitz’s Double Cranes situated in the old Antwerp harbor—sentinels left behind when the harbor was modernized and pushed further out toward the sea. Too expensive to dismantle, these giant cranes remind us of a time past, when heavy industry kept Europe and the United States producing and increasing their gross national profits.

Hurwitz’s prints, then, sound a meditative note. He has created his art through a span of fifty years, from the time when the economy was expanding and Americans thought of their era as “the American century,” to the present, when heavy industry seems to have disappeared from our shores and moved to foreign countries. That is not wholly true, but rusting machinery, boarded-up old factories, and blighted urban landscapes—and the unemployment that accompanies that situation—make us wonder whether America’s industrial base will ever again achieve that era’s greatness for Americans. But whatever the future holds, Sidney Hurwitz’s art has captured and preserved the sublime beauty of those old factories, bridges, and elevated trains.

**Notes**

I want to thank Sidney Hurwitz for giving me the opportunity to write about his life and work. For reading and commenting on my essay, I am grateful not only to Sidney but to Keith N. Morgan and Kevin Whitfield.

3. In conversation with author on October 7, 2008, Hurwitz recalled that during the time of his attendance, Herbert Barnett ran the school and Mary Murphy taught drawing.

5. This was not his first trip to Europe. During 1959–60, Hurwitz and his wife, sculptor Penelope Jencks, lived in Freiberg and Stuttgart, Germany, while he was on a Fulbright Fellowship.

7. Today the abrasives factory is owned by Compagnie Saint-Gobain.

8. Author’s conversation with Sidney Hurwitz, September 9, 2008, Boston.

11. Boston’s transit system of elevated, ground level, and below-ground tunnels is divided into four lines named after the colors red, green, orange, and blue, hence, his titles Orange Line and Green Line.

12. E-mail from Hurwitz to author, October 7, 2008.
